OPERATION INFORMATION:

A cable is connected from a fixed point to the cable end connection clevis. A pull on the cable with a movement of approximately $\frac{1}{2}$ " will actuate the switch and trip the flag arm down, into the walkway, and lock the switch and flag arm in the actuated position. Unit is reset by returning the flag arm to the normal up position.

ACTUATION FORCE:

Standard unit is supplied with an actuation (pull) force of 16 lbs. We can supply (at no extra charge) units factory set at 25 lbs. actuating force. The standard 16 lbs. actuation force will allow the use of far more cable, per switch, than would ever be required (over 500 ft. of unsupported cable).

INSTALLATION INSTRUCTIONS

1. Switch should be mounted on a flat surface using mounting holes provided. One fastener in each end of mounting bar will be sufficient.
2. Distance between switches should not exceed 200'. Use no more than 100' of cable per switch end. This is for safety purposes, too much cable can result in a "long pull" situation due to slackness in the cable.
3. Space cable support eye bolts every 10'. Keep cable from becoming too slack, also not "tight" as to be pulling out the cable end clevis.
4. Wiring should be through the motor control circuit.
5. After applying power, actuate by pulling cable to check switch. This will insure that there is not too much slack in the cable and that there are no obstructions in the cable or flag arm.

WIRING INFORMATION:

STANDARD SWITCH — One SP/DT switch per end (extra switch per end avail.)
 • 20 AMPS, 125, 250 or 480 VAC • 10 AMPS, 125 VAC "L" (tungsten lamp load)
 • 1 HP, 125 VAC • 2 HP, 250 VAC • $\frac{1}{2}$ AMP, 125 VDC • $\frac{1}{4}$ amp, 250 VDC

OPTIONAL SWITCH — One two circuit double break switch per end (extra switch per end available.) • 15 AMPS, 120, 240, 480 or 600 VAC • $\frac{1}{2}$ HP, 120 VAC
 • 1 HP, 240 VAC • 0.8 AMPS, 115 VDC • 0.4 AMP, 230 VDC

SINGLE POLE, DOUBLE THROW CIRCUIT

TWO CIRCUIT, DOUBLE BREAK CIRCUIT

NOTE: Two circuit double break switches must be wired to equal voltage sources and the same polarity. Loads should be on the same side of the lines. 1B has the same polarity as 3A.
